

AI-Assisted Operations for Biometrics and Biostatistics

INNOVIZZ builds programming automation, review tools and platform improvements in approved systems. Practical model assistance where useful, with specified checks and named acceptance.

01 / ENGAGEMENT OPTIONS

Choose the right starting point

Individual Clinical services can stand alone. Biometrics Modernization combines selected programming, QC and platform changes around a delivery bottleneck.

02 / FIRST CONVERSATION

Free 30-minute scope conversation

Bring a workflow description, your platform, the delivery bottleneck and the review owner. A defined service can be scoped directly.

03 / WHEN INVESTIGATION IS NEEDED

Validated Automation Review

A separate review is available when the scope needs investigation. Indicative duration: **2-4 weeks**, subject to scope and access.

Outputs: a prioritized plan, readiness gaps, proposed acceptance criteria, implementation scope and an estimate.

04 / DELIVERY

Define, implement and measure

Assessment establishes the baseline and readiness, prioritized scope, agreed checks and reviewer roles. Implementation is measured against the agreed baseline.

05 / CLIENT PARTICIPATION

Name the owners and reviewers

Provide a named workflow owner and relevant programming, platform and QA reviewers. Workshops, access and availability are agreed before work starts.

06 / PROCUREMENT & HANDOVER

Agree terms before paid work

Fees are quoted in writing before paid work. Implementation is a separate decision.

Handover includes agreed source or configuration, specifications, test records, and an operating guide and training.

Ownership, pre-existing INNOVIZZ methods, third-party licences and support terms are specified in the statement of work.
